

Blitzstrom substructure for every application

Custom-developed highly durable substructure assemblies and mounting accessories that have proven themselves many times over are included in every Blitzstrom system kit.

Our mounting hardware is compliant with all norms and regulations and is available in multiple variants that are specified by our engineers in the planning phase according to the respective load conditions according to DIN 1055/1045/18800/1052/4113.

If necessary, customized substructure assemblies will be designed to fit the application at hand.

Our technical development staff keeps in touch with our resellers to constantly improve and adapt our mounting systems to the requirements of our customers.

Blitzstrom mounting substructure:

- Modular, adaptable system design
- Compliant with all respective norms and regulations
- High durability
- Custom designs for excessive wind and snow loads possible
